

1. Company name

Please specify you company name as you would like it to appear in MyPost Business.

2. Partnership Agreement

If the integration is via a 3rd Party, Platform Partner or a combination of both, please confirm that the license agreement has been signed and returned for execution.

API License Agreement signed:

☐ Yes*

☐ No

*Execution Date: select the date the agreement was executed

Select the field and use the date picker

3. Lodgement Plan

Describe the integration workflow and plan (API calls and sequence):

4. Product Features

Supported Features:

☐ Signature on Delivery

☐ Extra Cover

☐ Pickup within Order

5. API Calls

Please select all API Calls implemented.

Required APIs	Supplementary APIs	Alternate APIs
☐ Get Organisation	☐ Create Payment with Charge Account (Alternate)	☐ Update Item
☐ Create Domestic Shipment	☐ Pickups	☐ Get Label
☐ Create International Shipment	☐ Get Item Price	☐ Get Order
☐ Create Order from Shipments	☐ Validate Suburb	☐ Create Order Including Shipments
☐ Create Label	☐ Get Shipment	
	☐ Delete Shipment	
	☐ Track Items	

6. Create Orders from Shipments

If a Merchant is paying for more than 1 label, the Create Orders From Shipments call must contain consolidated shipments to avoid the financial institutions from blocking multiple payments on a credit card, this may occur if multiple Create Order From Shipments are done in close succession.

Please check your solution:

☐ Orders are consolidated within the Create Orders from Shipments API call

7. Pick-up within order creation

Pick-up requests are limited to 1 pick-up product only per order, and a maximum of 50 shipments per pick-up request.

Please check your solution:

☐ A maximum of 1 product ID per pick-up request

☐ A maximum of 50 shipments per pick-up request

8. Onboarding via Platform Partner (OAuth)

Are you requesting an Authorisation Code grant for merchant onboarding?

☐ Yes ☐ No

If **Yes**, please provide your redirect URI details:

9. JSON Payloads and labels

Please provide JSON payloads for each request/response of all endpoints you have integrated
Please also provide label examples for all of the products you are supporting.

Attach JSON payloads as TXT files

[Click here to view attachments](#)

10. Development Verification

To verify development of MyPost Business integration is to specification and compliant, the below options are available.

Please select your preferred choice:

- ☐ a) Sandbox/Web staging environment
- ☐ b) Video conference walk through

If **a)** is selected, please provide URL and access credentials.

If **b)** is selected, please provide email contact details and your preference of Microsoft Teams or Cisco Webex

On successful completion of both the technical sign of document and the development verification, production credentials will be provided.

11. Error Handling

Describe the error handling methods applied to the integration. The intent of this section is to ensure that sufficient error handling is implemented to capture the error and provide sufficient information about the error in order for the relevant parties to troubleshoot the issue. This should include information provided back to the end user (error messages need to contain sufficient information to enable further investigation).

Describe the process to troubleshoot errors – including who is responsible:

Please check your solution:

- ☐ Allows recovery after the 55 seconds, no response or timeout response received.
- ☐ Can interpret error messages returned by our Shipping & Tracking APIs and translates into meaningful (plain English) error messages to the end user.
- ☐ Provides the end user with an interface or process which allows the end user to recover shipment/manifest information without the need for complex processes or access to the underlying code.
- ☐ Internal errors which respond to the particulars of the customised solution result on error messages which point the end user to contact their IT Department or consultation with their Business for support.

12. Address Validation

Describe the method and tools used to validate addresses:

13. Basket Size

Shipments that are created throughout the course of the day are stored in a basket. At any point in time, a maximum number of 10,000 items can be stored in this "basket". Items are cleared from the basket after you include the item/shipment into an order.

Please check your solution:

- ☐ Leverages the update and/or delete shipment call(s) to ensure effective management of this basket.
- ☐ Can interpret the error message that will be returned when you exceed the basket size.

14. Limitations and Considerations

If more than 2000 items will need to be added to an order, the order will need to be split up into separate **Create Order** payloads.

Does your system adhere to the "2000 maximum article limit per Create Order" requirement?

- ☐ Yes
- ☐ No

15. Service Availability and Status

We regularly conduct health checks and system optimisations of our technology platform. From time-to-time, scheduled temporary suspension of services are required to complete maintenance work.

Please register for status updates at status.developers.auspost.com.au

Do you have a formalised process in place for communicating planned outages within your organisation?

☐ Yes

☐ No
